

# Bematex CA12 Cone Winder

**‘Gino’**

**With ‘Gino’ the Cone Winder we broke with tradition and bit the bullet and bought a brand new machine! Gino is now 2 years old and replaced our old LESONA Cone Winder. He is more efficient, quicker, accurate and has flashing lights.**

**The Cone Winder does exactly that - it winds yarn from Cops or Bobbins into a yarn package known as a cone of yarn. Gino is able to measure accurately a specific quantity of yarn onto a cone which is essential when we are folding or plying a yarn together. Gino has individual motors for each head and each one can stop independently. He is able to detect when the yarn has run out and automatically stops.**

*Cones of Yarn*

*Mr Lee (Lesona Cone Winder)*

**We can use the Cone Winder for various applications such as transferrring singles yarn from Butler or Kevin (Ring Spinners) onto cones ready for folding or plying on our Boyd Twister. We can package folded yarn from our Twister ready for outside dyeing or for commision customers, such as for sock knitting.**

**We still use our old Lesona cone winder called Mr Lee and he is fitted with slub catchers to eliminate faults in certain yarns. However Mr Lee will be replaced in the not too distant future with another Gino, but never scrapped!**
